

SinaDoxosome

Administration: Adult

IV:

Monitor for infusion reaction. For IV infusion only; do not administer IV push. If contact with skin/mucosa occurs, wash immediately with soap and water.

Administer IVPB over 60 minutes

It is recommended infusing the first dose at initial rate of 1 mg/minute to minimize risk of infusion reactions; if no infusion-related reactions are observed, then increase the infusion rate for completion over 1 hour.

The first dose at initial rate of 1 mg/minute

Do NOT administer undiluted. Do NOT infuse with in-line filters. Do not mix with other medications. Monitor for local erythematous streaking along vein and/or facial flushing (may indicate rapid infusion rate).

For multiple myeloma, administer doxorubicin liposomal after bortezomib on day 4 of each cycle.

Contraindications

SinaDoxosome

is contraindicated in patients who have a history of hypersensitivity reactions to its components or to doxorubicin HCl.

should not be administered during pregnancy or while breast feeding.

should not be used to treat AIDS-KS that may be effectively treated with local therapy or systemic alfa-interferon.
